

Exercise: Debugging, Adding Features, and Uploading to Github

Assignment No.1: A Bug to Fix

Issue: Currently, the player can move the tank beyond the canvas boundaries (size 800x600), causing the tank to disappear and making the game unplayable.

Fix Requirement:

Modify the tank movement logic in the ``updateGame()`` function to ensure the tank cannot move outside the canvas. The tank size is 40x40 pixels and should remain completely within the canvas at all times.

Assignment No.2: Implement at least two new features (Here are some examples to choose, you can also create your own to Implement)

Option A: Add an Enemy Target

Option B: Add Visual Feedback

Option C: Add a landscape

Option D: Decide yourself

Assignment No.3: Upload the assignment to Github and share a link
